

SCHEDULE OF SERVICES - V2

WE DELIVER A FULL RANGE OF GEOCHEMICAL LABORATORY SERVICES SPECIFICALLY FOR THE EXPLORATION AND MINING INDUSTRIES. MINERALS TESTING IS OUR CORE BUSINESS AND WE ARE EXPERTS AT IT.

We understand how vital your results are to critical decision making and will target a three week turn-around-time, providing 24/7 access to track your sample progress at any time.

At MSALABS, we take the time to understand your unique needs as they differ across every stage of the mining cycle and create tailored analytical and testing programs specifically for your project.

We then provide analytical results you can rely on with a faster turn-around-time than you are used to. Our average three week turn-around-time means you can make decisions sooner and your project stays on schedule.

Importantly, if your timelines change, we have the flexibility in most cases to reschedule partial batches to meet your new timelines or prioritise specific sample results.

Our global laboratory network means we provide services to many of the key mining regions around the world with minimal lead times for sample shipments.

Our full range of analytical services is suitable from greenfields exploration through to mine closure and includes sample preparation, a complete range of analytical techniques and construction and management of on-site laboratories. We also provide franchise opportunities for high-quality partners across the world.

Our company maintains the highest quality standards and has both ISO 17025 (Testing and Calibration Laboratories) and ISO 9001 (Quality Management Systems) accreditation

SAMPLE PREPARATION

Every step, from sample receipt until the laboratory begins the analysis, must be suitable for the specific needs of your project and sample matrix and completed with meticulous care to minimise contamination.

Our expertise and state-of-the-art equipment ensures sample preparation that will provide results you can trust. Our team can also provide advice on the most suitable sample preparation methods to meet your needs and will work closely with you to understand exactly what answers you want and how best to get them.

Our sample preparation services cover rock and drill core, soil and sediment and vegetation.

SAMPLE PREPARATION

Sample preparation includes all steps from sample receipt until delivery to the assay department. The purpose of sample preparation is to ensure that the laboratory processes a pulp representative of the whole sample. Sample preparation needs vary according to the project and the sample matrix. If you would like a specific sample preparation method, please let us know and we can tailor a package to your needs.

ROCKS AND DRILL CORE PACKAGES

Preparation of rock samples and drill core require meticulous care to produce a homogeneous sub-sample for analysis. MSALABS's Quality System is as comprehensive in Sample Preparation as in any other area of our business.

Rocks and drill core samples are crushed to 70% passing 2mm, then a representative split is taken and pulverized to 85% passing 75µm.

DESCRIPTION	CODE
Dry, crush to 2mm, split 250g sub-sample and pulverize to 85% passing 75µm	PRP-910
Dry, crush to 2mm, split 500g sub-sample and pulverize to 85% passing 75µm	PRP-915
Dry, crush to 2mm, split 1000g sub-sample and pulverize to 85% passing 75µm	PRP-920
Surcharge for samples > 1kg, per kg	PRP-950

SOIL AND SEDIMENT

Soil and sediment samples are dried and then screened to the desired mesh size. The undersized (-) fraction is analyzed and the oversized (+) fraction is discarded unless otherwise specified.

DESCRIPTION	CODE
Dry, screen to 80 mesh, discard plus fraction	PRP-757
Surcharge for samples >500g, per 500g	PSC-100
Extra drying for excessively wet samples, per 500g	DRI-100
Screen at other sieve size	PSC-999
Save all soil reject	PSC-110

VEGETATION

Depending on requirements, vegetation samples are either dried and macerated to 1mm, OR, dried then ashed at 475°C, prior to analysis.

DESCRIPTION	CODE
Dry and macerate to 1mm, per 100g	PRP-VG1
Dry and ash at 475°C	PRP-VG2
Save all or part of reject fraction	PSC-115

OTHER INDIVIDUAL PREPARATION METHODS

CORE SAWING

MSALABS uses state-of-the-art computerized core saws for precision cutting of drill core. The core saws are semi-automatic and totally enclosed thus very safe to operate. We are experts at core cutting and deliver the highest quality core cutting services. Our staff are highly experienced and trained in every step from the actual core cutting process to sampling of the cut core by following customer-provided instructions.

DESCRIPTION	CODE
Sawing of drill core with semi-automatic core saw	SAW-100

DRYING

DESCRIPTION	CODE
Drying at 60°C	DRI-060
Drying at 90°C	DRI-090
Extra drying time for excessively wet samples, per kg	DRI-100
Air drying of samples	DRI-200
Drying to customer specification	DRI-300

CRUSHING

DESCRIPTION	CODE
Crush up to 1kg to 70% passing 2mm	CRU-220
Crush up to 1kg to 90% passing 2mm	CRU-240
Crush up to 1kg to 70% passing 6mm (1/4")	CRU-260
Oversize surcharge, per kg	CRU-200
Crush to customer specification	CRU-999

SPLITTING

DESCRIPTION	CODE
Split pulp for various uses (Riffle Split), per kg	SPL-400
Split 250g crushed material (Riffle Split)	SPL-410
Split 250g crushed material (Rotary Split)	SPL-415
Split 1000g crushed material (Riffle Split)	SPL-420
Split 1000g crushed material (Rotary Split)	SPL-425

PULVERIZING

DESCRIPTION	CODE
Pulverize 250g to 85% passing 75µm	PPU-510
Pulverize 500g to 85% passing 75µm	PPU-520
Pulverize 1000g to 85% passing 75µm	PPU-530
Pulverize 500g to 85% passing 106µm	PPU-620
Pulverize 1000g to 85% passing 106µm	PPU-630

MISCELLANEOUS

DESCRIPTION	CODE
Wash crusher with barren material between each sample	PWA-200
Wash pulverizer with barren material between each sample	PWA-500
Homogenizing and pulverizing composite, per 250g	PPU-560
Homogenizing pulp by mat rolling	PRO-100
Homogenizing pulp by light pulverizing	PRO-200

SAMPLING SUPPLIES

Shipping Sacks (Rice Bags)	10
Plastic Bags, 6 mil 8" x 13"	100
Plastic Bags, 6 mil 12" x 18"	100
Tin-Tie Bags	1,000
Cable Ties, 7"	100
Assay Tags, 50 tags/booklet	Per booklet

SAMPLE RECEIVING AND LOGISTICS

SUBMITTING SAMPLES

Please ensure that all samples are labeled and the Sample Submittal Form (SSF) is properly filled out and name printed out and/or signed. If you have any questions about the submittal form, do not hesitate to contact us. If the form is not filled out properly or is unclear, it can result in a delay.

The minimum details that we require before we can process your samples are:

- Your company name and contact name(s)
- List or range of sample IDs
- Prep and analytical code(s)
- Result destination(s)
- Invoice destination(s)
- Sample return / Disposition instructions
- Printed name or signature

PACKAGING AND SHIPPING

Ensure that your samples are well packed and guarded against any leakage or breakage. International soils require special permit. Please contact us at Customer.service@msalabs.com to obtain a copy. Samples may be sent via Canada Post, Reputable Courier or Freight company. Advise courier used and waybill number of incoming shipments to aid in ease of tracking.

INTERNATIONAL SHIPMENTS

All shipments should be labeled as:

**“Geological (specify Rock or Soil) Samples for Analysis only.
No Commercial Value”**

Customs Broker (if required):

Cole International

Tel. +1 604-273-5161

If you have any questions, please call or e-mail us at:

Tel. +1 604-888-0875

Email. contact@msalabs.com

ADMINISTRATION FEES

DESCRIPTION	CODE
Batch charge for shipments less than 20 samples	ADM-100
Log sample received as pulp	PLG-100
Sample pick up service available at any MSALABS	PIC-100

Please contact us for more information.

SAMPLE STORAGE AND DISPOSAL

All pulps and rejects will be stored at our facility free of charge for 90 days. The free storage period starts on the day that the Test Report is released. At the end of this free storage period, the samples will either continue to be stored, disposed or returned to you. Please inform if you would like your samples returned to you sooner (that is, as soon as analysis is complete).

For samples to be returned, our staff will contact you to arrange shipment. You will be invoiced for the shipment cost. If there is any change of sample storage information, please contact us within the 90-day free period.

DESCRIPTION	CODE
Handling and retrieval of pulp or reject from storage, per hour	STO-100
Storage of reject after 90-day free period, per sample/month	STO-200
Storage of pulp after 90-day free period, per sample/month	STO-300
Reject disposition, per sample (≤ 3 kg, > 3 kg by quotation)	DIS-100
Pulp disposition, per sample	DIS-200
Disposition of sample solutions, per sample	DIS-300
Heat treatment and disposal of International soils	DIS-400
Special handling, per hour	HAN-200
Return shipment of reject / pulp	DIS-500
Environmental Levy – for safe disposal of fire assay spent materials	DIS-600*

* Per sample

PRECIOUS METALS ANALYSIS

We offer gold, platinum group and precious metal analyses suitable for grassroots exploration through to resource estimation and grade control.

Our methods are suitable for ultra-trace to bullions, low and high grade material, through to precious metals forming a component of a trace element, finely disseminated grains or nuggets.

Sample pulp is mixed with a combination of chemical reagents. The mixture is heated at high temperature resulting in the formation of a lead button and slag. The lead button which contains the precious metals is cupelled at high temperature. The lead is absorbed by the cupel and leaves behind a bead that contains the precious metals. The bead is acid digested and analyzed by instrumental or gravimetric method. In order to optimize the precious metals recovery, the lab reserves the right to reduce the sample weight.

METALLIC SCREENING - GOLD

When samples are known to or suspected to contain metallic grains, it is preferable to analyze by metallic screening. 500g or 1kg of sample will be screened to 106µm. The entire plus (+) fraction is assayed while the minus (-) fraction is assayed in duplicate. Both fractions use fire assay techniques with gravimetric or instrumental finish. Other screen sizes are also available upon request.

GEOCHEMICAL ANALYSIS

When you are making vital and costly decisions based on data provided from your geochemical analysis, you need consistent, reliable results and fast turn-around.

Our team will provide advice on the most appropriate method for your project, both technically and economically, to ensure your decisions are based on accurate data.

Our range of services will meet project needs from greenfields and brownfields exploration through to ore body definition, grade control and concentrate analysis. Our multi-element packages ensure that each method presents an optimal solution for different sample matrices, target commodity and detection limits.

Please note some detection limits may vary depending on the sample matrix.

AQUA REGIA DIGESTION

MSALABS offers various types of Aqua Regia digestion: a true 3:1 mixture of hydrochloric and nitric acids and dilute mixtures (equal portion) of hydrochloric, nitric, and deionized water. Aqua Regia acts as an oxidizing agent to dissolve most oxide, sulfide and carbonate minerals and is an excellent trace level exploration tool.

This is a partial digestion ideal for greenfields exploration since more resistant minerals including silicates are not significantly digested. By leaving the matrix undissolved, mobile pathfinder elements produce greater anomaly to background contrast enhancing confidence during target generation.

ICA-5xx*

4 - ACID DIGESTION

4-Acid or 'near total' digestion uses a combination of hydrochloric, nitric, perchloric and hydrofluoric acids. Only the most highly resistant minerals will not be dissolved. Mercury is volatilized in this type of digestion; however, it can be added by using aqua regia digestion at an additional cost.

Minimum weight requirement is 1g pulp.

MULTI-ELEMENT ICP-MS (48 ELEMENTS)

ULTRA TRACE LEVEL – 4-Acid

WHOLE ROCK BY XRF

MSALABS uses new generation XRF instruments to give the explorationist more choices in the analysis of whole rock, REE's and refractory elements. Its key feature is a reproducible XRF elemental analysis across the periodic table. It is the preferred method for higher mineralized samples.

MSALABS also has the ability to remove mineralogical matrix effects by fusing the samples with high purity X-Ray flux at high temperatures using fully automated fusion equipment, producing a homogeneous glass disk.

The results obtained using this method are far more reliable than any other methods for refractory and high concentration elements.

Minimum weight requirement is 5g pulp.

INSTRUMENT NEUTRON ACTIVATION ANALYSIS (INAA)

Instrumental neutron activation analysis (INAA) is used to determine the concentration of elements in a variety of matrices. A sample is irradiated and as it decays, it produces radioactive nuclides which emits gamma rays whose energies are characteristic to each element. Contact us for more information.

Minimum weight requirement is 25g.

SPECIALTY ASSAY

Our range of specialty assay services enable you to go deeper in the search for geochemical knowledge. Whether it be downstream concentrate analyses, or upstream low level multielement determinations, we have a solution to suit your needs. Our Geochemists are available to advise on the best methods to quantify your sample composition.

GRASSROOTS EXPLORATION

Here you will find analytical packages to determine low grade elemental occurrence in waters and vegetation. These methods are an invaluable tool to provide you with geochemical information in the hunt for hidden mineralization

BIOGEOCHEMISTRY

Vegetation and trees can absorb mineral-rich nutrients via root systems from their environments – soil, bedrock, water – and provide the explorationist with significant geochemical information. Vegetation surveys can provide an effective complementary data for deeply buried deposits when establishing geochemical signatures. Macerated or ashed sample analyses are available. The default sample weight for macerated samples is 1g and for ashed samples is 0.25g.

Other sample weights are available on request.

HYDROGEOCHEMISTRY

Surface and groundwater surveys can be an effective tool in mineral exploration. As water comes in contact with rocks containing ore deposits, minerals may dissolve in the water emulating the chemical composition of the rock. Ultra trace analysis by ICP-MS provides the sensitivity required between background levels and anomalous levels.

Water sampling bottles, 0.45 µm filters, environmental grade nitric acid, and deionized water for field blanks can be provided at cost. Please notify the lab in advance for the supplies prior to sampling.

Minimum sample volume requirement is 25 mls.

Dilution of samples containing >1% solids										DIL-IMS

Detection Limits are based on samples containing low levels of total dissolved solids (less than 0.1%). Samples containing high levels of total dissolved solids will be diluted prior to analysis and as a result, the cost and detection limits will change.

ANALYTICAL SERVICES

For your high-grade materials, we have methods to accurately determine the level of metals of economic interest. Speak with one of our chemists to coordinate the analytic technique best suited for your material.

BULK LEACH EXTRACTABLE GOLD (BLEG) - Cyanide Leach

Test uses cyanide to extract gold into solution. These procedures can be applied to geological samples in which fine gold may be present or where gold may be heterogeneously distributed. Advanced BLEG test is also available where it uses multiple sampling periods as well as analysis of the leached solution and the residue to better understand the leachability of the ore.

DESCRIPTION	DETECTION RANGE (PPM)	CODE
BLEG Quick cyanide test, leached solution by AAS	0.01 – 100	AU-CN00
BLEG Leached solution by AAS, Residue by fire assay	0.01 – 100	
500g		AU-CN01
1kg		AU-CN04
ADVANCED BLEG 2hr, 6hr, 24hr, 48hr sampling of cyanide liquor with AAS finish Fire assay of residue before leaching and after 48 hours	0.01 – 100	AU-CN02
METALLURGICAL BLEG		AU-CN03

Multiple sampling periods to determine leach kinetics.

Detailed metallurgical balance including head and leach residue assays.

Additional options include:

- Examination of the effect of additional reagents,
- Modification of test parameters such as oxygen levels, temperature and particle size,
- In conjunction with other mineral beneficiation processes.

PRECIOUS METALS IN METALLURGICAL SAMPLES

DESCRIPTION	DETECTION RANGE (PPM)	CODE
GOLD		
Trace level – Fire Assay/AAS finish	0.005 - 10	MET-FA1
Ore grade – Fire Assay/AAS finish	0.01 - 100	MET-FA2
Concentrate – Fire Assay/ Gravimetric finish	0.9 - 10,000	MET-FA3
SILVER		
Concentrate – Fire Assay/ Gravimetric finish	50 - 10,000	MET-FA5
GOLD AND SILVER		
Ore grade – Fire Assay/Gravimetric Finish	Au: 0.9 - 10,000 / Ag: 50 - 10,000	MET-FA7
Gold medium grade – Fire Assay/AAS finish and		
Silver medium grade – Aqua Regia digestion/ICP-ES finish	Au: 0.01 - 100 / Ag: 1 - 1,500	MET-FA8
GOLD, PLATINUM AND PALLADIUM		
Trace Level – Fire Assay/ICP-ES finish	Au, Pd: 0.002 – 10 / Pt: 0.005 - 10	PGM-133
Ore Grade – Fire Assay/ICP-ES finish	Au, Pt, Pd: 0.01 - 100	PGM-233

CARBON AND SULFUR ANALYSIS

C&S MET-750

Review parameters under Specialty Assay. (page 17)

OTHER SERVICES

MSALABS provides a range of other services including Laboratory Construction and Management and a range of Metallurgical Services.

LABORATORY CONSTRUCTION AND MANAGEMENT

ON-SITE LABORATORIES

MSALABS provides high-quality and cost efficient modular laboratory facilities.

Our team will work with your specific space and technical requirements to deliver a customized on-site laboratory for your project success.

Our customised on-site laboratories reduce the lead-time for results, meaning you get your data faster and your project stays on plan.

MSALABS offers the following:

TURNKEY CAPABILITIES:

One point of contact for your laboratory design, engineering and installation needs.

CUSTOM DESIGNED UNITS:

All units are built to ensure efficient work flow in the laboratory and meet your technical specifications.

INSTRUMENT/EQUIPMENT EVALUATION:

Our technical laboratory staff ensures each instrument has ample space and proper utilities for operation.

TECHNICAL SUPPORT:

Our technical team can provide short-term support during method development or long-term on-going support during operation.

STAFFING SOLUTIONS:

Our team offers flexible staffing solutions. From training your staff on current methodologies to our assayers operating an on-site laboratory, we can develop a package that suits your project needs.

METALLURGICAL SERVICES

MSALABS is pleased to partner with one of the leading metallurgical laboratories. Our partner laboratory works on the principle that effective process development in extractive metallurgy requires more than just a set of lab tests. It recognizes that every customer and project require support at numerous levels of process development.

The team will help identify the best testing methodologies at each stage of the process development cycle: whether it be mineral beneficiation or metal production. Testing services include:

GRAVITY CONCENTRATION

Centrifugal gravity concentration, Shaking tables, Spirals, MAT table.

Mathematical modelling of full size gravity concentration circuits.

FROTH FLOTATION

Preliminary scoping, detail optimization, closed circuit (locked-cycle) and column options on sulphide, oxide, and industrial minerals.

DENSE MEDIA SEPARATION

Bench-scale and pilot-scale options, heavy liquid, ferrosilicon or magnetite-based media.

CLASSIFICATION

Crushing, grinding, screening, de-sliming and particle size analysis, Bond Ball Mill Work Index.

HYDROMETALLURGY

Cyanide leach test work, including bottle roll, reactor and column leaches, acid and caustic leach testing, Ion exchange and solvent extraction.

PILOT-SCALE ROTARY SCRUBBER TESTING, USED FOR DEPOSITS WITH POTENTIAL CLAY ISSUES

To break up agglomerates or lumps in clay-like deposits to liberate encased target minerals prior to beneficiation.

SETTLING TESTS

Coagulant & flocculent selection, column settling rate measurement.

TERMS AND CONDITIONS

Services provided by MSALABS will be subject to these terms and conditions unless otherwise agreed in writing by MSALABS.

PRICING

Prices are subject to change by MSALABS without prior notice. Requests for services will be invoiced at the prices in effect at the time samples and a completed Sample Submittal Form (SSF) are received at MSALABS. Prices on MSALABS's website or quoted by an Account Manager are for the analysis of geological or metallurgical samples only and do not include applicable taxes. A batch charge applies to each work-order less than 20 samples.

PAYMENT

MSALABS accepts cash, cheques, bank drafts, wire transfers, PayPal and major credit cards as a form of payment. Payment terms are net 30 days. Overdue accounts are subject to an interest charge of 1.5% per month. MSALABS reserves the right to discontinue work or withhold results if the customer fails to observe these payment terms.

LIABILITY

MSALABS is responsible for performing analysis of customer samples in accordance with accepted professional standards using accepted and where applicable, accredited testing methodologies unless specific less stringent methods or procedures are requested by the customer. MSALABS's liability in connection with the performance or non-performance of the analysis is only to the customer and does not extend to the customers' or MSALABS's successors, assigns, associates, affiliates, officers, employees, directors, contractors, customers to any other third party and is limited to the cost of the specific analysis. MSALABS has no liability for indirect, exemplary, consequential, incidental or punitive damages, including loss of profits.

CONFIDENTIAL INFORMATION

All results and information obtained by MSALABS will be held in strict confidence unless (a) the customer has directed MSALABS Services to do so in writing or b) required by law or the rules of relevant stock exchange. MSALABS will only use Confidential Information for the purpose of supply of the requested Services.

SAMPLE SUBMITTAL FORMS (SSF)

A completed and signed SSF with instructions for analysis, reporting requirements and invoicing information must be provided at the time of sample submission. Sample submissions received without SSF may result in turn-around time delays.

SAMPLE QUALITY

The customer bears the sole responsibility for the quality of its samples as received by MSALABS. MSALABS will not be responsible for the loss, degradation, or contamination of samples that may occur in shipping to or from its Laboratory. MSALABS is not obligated to assess and report on the fitness of samples for the requested analysis.

TURN-AROUND TIME

MSALABS Services offers regular service and rush service for an additional cost. All samples received after 2:00 pm will be recognized as received the next day.

STORAGE AND DISPOSAL

All pulps and rejects will be stored at our facility free of charge for 90 days. The free storage period starts on the day that the Test Report is released. At the end of this storage period, materials will be disposed unless otherwise instructed. Disposal fees may apply.

QUOTATION AND ACCOUNT PAYMENT

Services provided by MSALABS will be subject to these terms and conditions unless otherwise agreed in writing by MSALABS.

QUOTATIONS

MSALABS would be pleased to provide a comprehensive quotation for your project needs, from analysis required in early exploration to metallurgical testing. We offer a full suite of services that can be customized to your unique requirements. Please contact MSALABS at Tel: +1 604-888-0875 or Email: customer.service@msalabs.com to speak to an Account Manager.

PAYMENTS

MSALABS accepts cash, cheques, bank drafts, wire transfers, PayPal and major credit cards as a form of payment. Please contact our Customer Services Department at Tel. +1 604-888-0875 or email: accounts@msalabs.com for information.

CREDIT ACCOUNT

If you would like to set up a credit account, please contact MSALABS at +1 604-888-0875 or Email: accounts@msalabs.com and we will send you a credit application form.

NON CREDIT ACCOUNTS

Customers without a credit account are required to pay prior to the start of analysis. Payment may be included with sample submission or by credit card pre-authorisation.
